

ARCHITECTURAL PUBLICATION SOCIETY. NEW AND IMPORTANT WORK.

THE DICTIONARY OF ARCHITECTURE.

To be completed in three years. Only a sufficient number of copies will be printed to supply Members. Annual Subscription One Guinea, 6s. in advance from the 1st of May, unless each Member to a copy of the periodical issued during the year.

THE HISTORY OF ENGLAND DURING THE THIRTY YEARS' PEACE.

WITH AN INTRODUCTORY SKETCH OF THE HISTORY OF EUROPE FROM 1660 TO 1713; BY HARRIET MARTINEAU.

In the Number of the Quarterly Review just published, the following remarks occur in the course of a lengthened Article on this Work:—

"The mind is not permitted to exclusive information, but she shows complete mastery over materials, such as they may be, both in their disposition and treatment. Her style has some resemblance to that of the French memoirists, being rapid and glancing rather than steady and methodical. She does not so much relate as indicate events, but this is done with so much animation and such facility of language and allusion, that the mind is kept constantly attracted, even when the subjects themselves are far from interesting."

CHARLES KNIGHT'S CABINET EDITION OF THE WORKS OF WILLIAM SHAKSPEARE.

This new issue of KNIGHT'S CABINET SHAKSPEARE is beautifully printed on fine paper, the title-pages adorned by copies of the various Portraits of Shakspeare, and each play embellished by an elegant illustrative Engraving.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY. Established at York 1824, and incorporated by Act of Parliament 1825, Capital, 500,000.

Table with columns for Age (years), Males, Females, and Whole Life Premiums. Rows show data for ages 10 to 65.

EXAMPLE.—A gentleman whose age does not exceed 45 may insure 1000, payable on his decease, for an annual payment of 25 1/2s; and a lady of the same age can secure the same sum for an annual payment of 18 1/2s. The rate of premium for the insured age, and every information, may be had at the Head Office at York, or at any of the Agents.

FIRE INSURANCES. Agents are wanted in those towns where no appointments have been made, to be made by Mr. W. L. NEWBOLD, Actuary and Secretary, York; or to Mr. RICH WOOD, Solicitor, 12, John street, Bedford-row, Agent for London.

VEGETABLE GAS LIGHT COMPANY.—This Company having, under the security of letters patent, extended their capital and premises are now READY TO CONTRACT FOR LIGHTING VILLAGES, churches, manufactories, railway stations, public buildings, noblemen's mansions, &c. This gas has four times the illuminating power of coal gas, consumes much less heat, and can therefore be applied with safety to small apartments; it is perfectly free from all admixture of oil or other impurities, and is of superior quality. The apparatus occupies small space, and is easily removed from the construction there is remarkable security against danger of explosion. It is made in the most perfect manner at Stone Colton, No. 18, Portland-place, Wandsworth-road, London, or at Stone Colton; the town of Blackpool; Railway stations, and other places.

PATENT SILICIOUS STONE COMPANY.

Provisionally registered. Capital, 50,000 in 500 shares of 100 1/2s. on the complete registration of the company. Future value estimated at 100 1/2s. per share. To be made at intervals of not less than three months.

PROVISIONAL COMMITTEE. Professor D. T. Ansted, F.R.S. 17, Manchester-street, London. James Beadell, Esq. Ormsland-street, London. Peter Brax, Esq. C.E. Ipswich. J. C. Corbhill, Esq. 11, St. James's-street, London. J. A. Langley, Esq. Bloomsbury Market. Frederick Ransome, Esq. C.E. Ipswich. Wilmer Wilmer, Esq. 24, St. James's-street, London.

The object of this Company is the working of the Patent granted by Mr. Frederick Ransome, of Ipswich, for improvements in the manufacture of Artificial Stone. As the patents were secured some time since, and the patentee has subsequently devoted his energies to developing his power, and has not been able to give a general and liberal distribution attending the introduction of a new manufacture. He has fully succeeded in attaining these objects, and it is now found necessary to enlarge very materially the scale of production.

The process of manufacture is exceedingly simple, economical, and the solution of that in caustic alkali at high temperature, which the solution thus obtained producing a silicious compound, which can be moulded with mud into any required form, and is made to receive the most delicate impressions. In this state it is baked in a kiln, the result being a silicious stone, equal to the best sandstone, and indestructible by atmospheric changes. It is a perfect advantage of this material that no shrinkage occurs during the drying and baking, and no warping or unequal contraction can be produced of any colour, and made to represent granite, marble, &c.

The principal applications hitherto used in the arts have been to the execution of architectural decorations, such as balustrades, ornamental pavements, sashes for facing buildings, mouldings, chimney pieces, terraces, walks, monuments, &c. and in the manufacture of Bibles. In all these applications the results have been eminently successful, and show a steadily increasing demand.

The Patent Stone has received the approval of the most judicious and practical men of the day, and is now in use in the most important specimens which have been exhibited in several exhibitions in the action of frost and other atmospheric changes, during a period of several years, without exhibiting the slightest appearance of injury, and the "Prize Medal," of the Great Exhibition of 1851, has been awarded in testimony of its merits.

The patent stone over the whole of the United Kingdom, and the principal license which it is proposed to be granted to the Company can be purchased on very favorable terms, the particulars of which may be ascertained on inquiry at the office.

Judging from the cost of manufacture of this material at present, and the price obtained, a profit of at least 10 per cent. may be confidently anticipated upon the whole of the capital proposed to be invested. The limited extent of the present works, and the cost of the transport have hitherto prevented the full development of the patent, but a considerable extent has been already executed, and many others are now in course of completion. Several large contracts are now on order, considerable quantities of the patent stone are now being manufactured at A. S. QUOK, Esq. Moor-church, Nip. Chambers, Throgmorton-street.—Prospectuses, containing full testimonials, with forms of application for shares, may be obtained, and specimens of the stone sent, at the office, 71, Cornhill, from eleven till three, daily.
